

# Factsheet

## PDPS Cautious

Data as at 31/03/2026

**Profile description:** This profile is a multi-asset portfolio that employs an active selection of collective investment schemes ('funds'), including Lloyds Wealth's own in-house funds. This low risk profile aims to achieve reliable long-term growth with a relatively modest risk of capital loss over the shorter term. This is achieved through a diversified portfolio of investments, with exposure mainly to lower risk investments. It could be suitable if your aim is to build wealth for the future without putting your investment at a high risk of long-term losses.

### Performance of £100,000

### Profile Facts

<b>Benchmark Name</b>	Composite*
<b>Discretionary Management Fee</b>	0.33%
<b>Ongoing Charge</b>	0.56%

The following composite benchmark has been chosen to measure performance as it best represents the assets within the portfolio.  
 \*Composite Benchmark - the profile's benchmark is a composite of 18.0% Bloomberg Global Aggregate Treasury GBP Hedged Index, 26.5% Bloomberg Global Aggregate Treasury Value 1-5 Years GBP Hedged Index, 8.0% Bloomberg Global Aggregate Corporate GBP Hedged, 12.0% Bloomberg Global Aggregate Corporate Value 1-5 Years GBP Hedged Index, 3.5% Bloomberg Global High Yield Corporate GBP Hedged, 4.5% MSCI UK IMI index GBP (TR Gross), 25.5% MSCI ACWI ex UK GBP (TR Net), 2.0% SONIA\*\*

\*\*SONIA (Sterling Over Night Indexed Average) is an overnight rate, set in arrears and based on actual transactions in overnight indexed swaps for unsecured transactions in the Sterling market.

## Glossary

**Asset Allocation:** An investment strategy that apportions different weightings to asset classes seeking diversification and balancing risk and reward.

**Alternative Investments:** An asset that does not fit into the conventional categories, typical examples include private equity, venture capital, property, commodities.

**Composite Benchmark:** A standard used to measure the performance of the profile by combining different indices in the same

proportions as the investment strategy to reflect the underlying assets.

**Consumer Discretionary:** Goods and services that are non-essential but desirable if consumers have sufficient disposable income.

**Consumer Staples:** Essential products that people regularly buy and use, regardless of economic conditions.

**Equity:** A share in the ownership of a company that is usually (but not necessarily) listed on a stock exchange.

**FI Securities:** Fixed income securities such as government bonds from which the investor receives a pre-determined interest rate on the amount invested.

**PDPS:** Personal Discretionary Portfolio Service.

**Returns (Cumulative):** Total return of an investment over a stated period of time as a flat percentage.

## Risk Considerations

**Diversification risk:** Diversification aims to reduce the total risks across all your portfolio. However, if one investment performs really well its influence on portfolio returns could be diluted by poor performance in other investments.

**Market risk:** Sometimes a single event can cause the values of all investments in a particular asset class (such as property or shares) or a country (like the UK or the USA) to fall suddenly and/or significantly.

**Inflation risk:** The risk that the value of your investments does not keep pace with increases in the value of the things you buy and enjoy.

**Liquidity risk:** The risk of not being able to sell your investments as quickly as you would like or at a price you had expected.

**Interest rate risk:** The risk your savings or investments lose money because interest rates have moved up or down. For example, your

cash deposits are in a fixed account for five years earning 1% interest, but over time interest rates in general have risen to 2.5%. On the other hand, if you don't fix the rate you receive and interest rates fall, you have also taken a risk.

**Currency risk:** If you invest in foreign assets, their value can be affected by changes in exchange rates. If the investment does well and increases in value in its local currency, it could still become a loss when changed back to sterling.

**Emerging markets risk:** Emerging markets' supervisory standards may not be comparable with those in developed markets and their stock markets might be less well organised and less well regulated. Other risks include political and social unrest; limited liquidity and exchange controls; currency instability; limitations on repatriation of capital; relatively high transaction and other investment costs; differences in accounting, auditing and financial reporting standards and potential difficulties in obtaining information

about issuers and markets; and governmental intervention in the private sector, including the rights of foreign ownership.

**Stock-specific risks:** These are the risks associated with an individual investment. Diversification aims to minimise this type of risk by spreading your money across a number of investments.

**Default risk:** Generally associated with bonds, this is when an issuer fails to keep up with interest payments or fails to repay the amount borrowed at the end of the bond's life.

**Credit risk:** This is the fall in value of a bond on speculation the issuer could default on its obligations (see above).

**Institutional risk:** This is the risk the bank or building society holding your money fails.

**Counterparty risk:** The risk that the other party in a contract defaults, for example the provider of an investment product.
